

Installing EndNote on PC

- Go to <https://www6.uis.no/dist/>
- Log in via Feide.
- Choose «EndNote» under Available Software.
- Choose Windows
- There are three links on this page. All of them have to be saved in the same folder. You do it like this:
 - Make a new folder, on your desktop or in Documents
 - Right click on the three links, and choose «Save link as» or «Save target as» (this text may be different on different PCs and browsers).
 - Save in the new folder you have made.
 - Go into the folder and right click on ENX8Inst.msi. The installation will start and you go through it the same way as when you install other programs.
- Save at F if you use a PC from UiS. If you use your own private PC, save on C.

Do not download the 30 days trial!

Contact the library if you have any problems with the installation.
